

Danielle Regis

Danielle Regis is a Deployment Strategist at Palantir Technologies, where she plays a pivotal role in shaping strategic initiatives for Army Intelligence Programs at the Edge. In this capacity, she drives the integration of cutting-edge technologies into critical national security operations, influencing high-level decisions on technological adoption.

Her career at the Central Intelligence Agency spanned diverse roles, starting as an Embedded Software Developer and culminating as a Senior AI Policy and Partnerships Advisor in the Directorate of Digital Innovation. At the CIA, Danielle led venture capital engagement for the agency's incubator, Digital Futures, and ran strategic large-scale acquisitions in the Directorate of Science and Technology.

Danielle's diverse experiences across the CIA illuminated the myriad of levers that need to align to best equip the intelligence community with emerging technologies. They span procurement, product development, policy formulation, and strategic partnerships. Her time at the CIA was in pursuit of addressing not only technical implementation but also the cultural and communication challenges of integrating innovative solutions into established tradecraft.

With an MBA from Harvard Business School and degrees in Electrical & Computer Engineering from Cornell University, Danielle brings a unique combination of technical acumen and strategic thinking to the critical challenge of leveraging emerging technologies developed in the commercial sector for national security applications.
